This guide will provide you with a brief introduction on how to integrate Foxit PDF Conversion SDK for .NET Core into the projects on Windows and Linux platforms. The following sections introduce the contents of system requirements, the installation package as well as how to run a demo, and how to initialize Foxit PDF Conversion SDK.

### 2.1 System Requirements

Platform	System Requirement	Note
Windows	Windows 10 (32-bit, 64-bit)	Visual Studio 2017 version 15.9 or higher  Prerequisites for .NET Core 2.1 or higher on Windows
Linux	64-bit OS <ul style="list-style-type: none"><li>The minimum supported version of the GCC compiler is gcc4.9.4.</li><li>The minimum supported version of GLIBC is GLIBC_2.17.</li></ul>	The sample for Linux x64 has been tested on Ubuntu14.04 64 bit.

**Note:**

- Starting from version 1.1, Foxit PDF Conversion SDK supports machine learning-based recognition functionality which can identify borderless tables in PDF documents. By default, it is disabled, if you want to enable it, please make sure the network is connected first.
- For PDF2Office, it supports Windows and Linux platforms. For Office2PDF, it only supports Windows platform currently.

### 2.2 Windows

#### 2.2.1 What is in the package

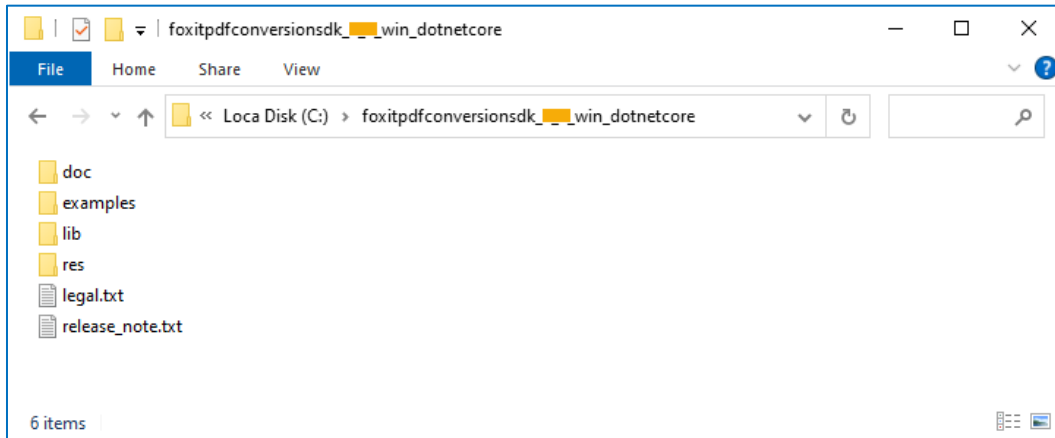

In this guide, the highlighted rectangle in the figure is the version of the SDK. Here the SDK version is 2.0, so it shows 2\_0.

Download the Foxit PDF Conversion SDK zip for Windows .NET Core package and extract it to a new directory "foxitpdfconversionsdk\_2\_0\_win\_dotnetcore", which is shown in Figure 2-1.

**Note:** You can also get this package from NuGet.

The release package contains the following folders:

<b>doc:</b>	API reference, developer guide
<b>examples:</b>	sample demo
<b>lib:</b>	libraries and license files
<b>res:</b>	font-related configuration files

**Figure 2-1**

**Note:**

- In "res\metrics\_data" folder, it contains the metrics data files which are used to simulate the Office format document typesetting process during PDF to Office conversion.
- In "res\office2pdf" folder, it contains the resource files which are used to simulate the Office format document typesetting process during Office to PDF conversion.

Open a command prompt, navigate to "\examples\simple\_demo", and then run the following command:

- For **32-bit** operating system, type "**RunDemo.bat pdf2office x86**" to run the pdf2office demo, and type "**RunDemo.bat office2pdf x86**" to run the office2pdf demo.
- For **64-bit** operating system, type "**RunDemo.bat pdf2office**" to run the pdf2office demo, and type "**RunDemo.bat office2pdf x86**" to run the office2pdf demo.

The output files (Word, Excel, PowerPoint, or PDF) will be generated in a folder named by the project name under "examples\simple\_demo\output\_files\" folder.
